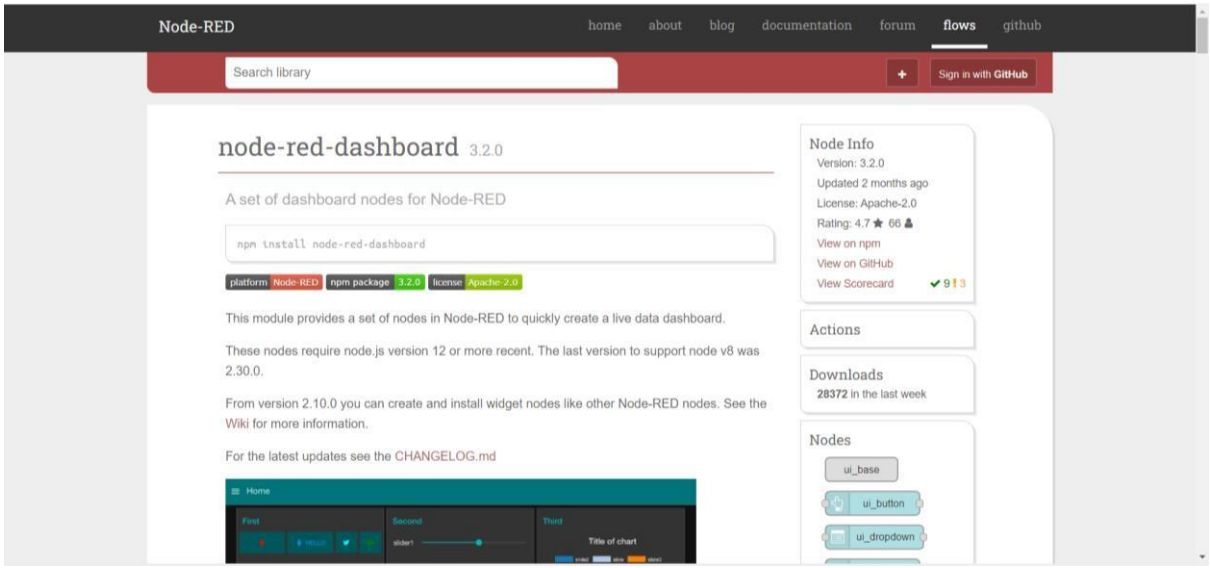
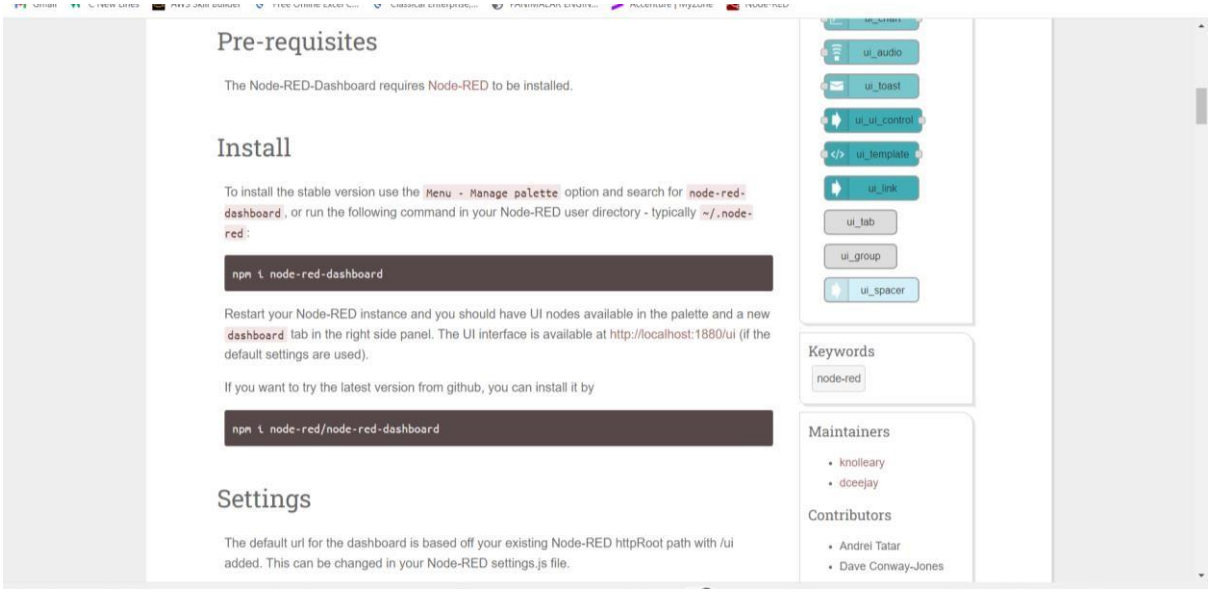
Use Dashboard Nodes For Creating UI(Web App)

Team ID	PNT2022TMID32725
Project Name	Hazardous Area Monitoring for Industrial Plant powered by IoT

Creating custom dashboards in the Web UI

- To create a dashboard using a template: Select a template from the DASHBOARD TEMPLATES list. Click Create Custom Dashboard. Name your dashboard. Click Create and Open.





Pre-requisites
The Node-RED-Dashboard requires Node-RED to be installed.
Install
To install the stable version use the Menu - Manage palette option and search for node-red-dashboard, or run the following command in your Node-RED user directory - typically ~/.node-red:
npm i node-red-dashboard
Restart your Node-RED instance and you should have UI nodes available in the palette and a new dashboard tab in the right side panel. The UI interface is available at http://localhost:1880/ui (if the default settings are used).
If you want to try the latest version from github, you can install it by
npm i node-red/node-red-dashboard
Settings
The default url for the dashboard is based off your existing Node-RED httpRoot path with /ui added. This can be changed in your Node-RED settings.js file.
